NoIndex NoFollow Tags

Extension Overview:

Magento 2 NoIndex NoFollow Tags Extension by Dotsquares lets you control which pages of the site should or should not be indexed or followed by Google or other search crawlers. With the Meta Robot Tags for your products, categories and CMS pages, you can decide which pages should or should not be indexed or followed by instructing the search engines. The No Follow tags restrict search engines to pass the link juice to other pages so to prevent the SEO score of your website.

Extension Features :

- Control website pages should or should not be indexed or followed by Google or other search engine crawlers.

- Configure Meta Robot Tags for products, categories & CMS pages.

- Instruct Search Engines from Indexing Certain Pages

- Setup No Follow Tags to retain the SEO score of your website

- Provide a Simple Interface for Admin

- Compatible With Magento Community 2.4 and Above

Extension Installation :
